Too many models. Too many SKUs. Too much cost.

The samples are provided

Phones are updated every year
SKU chaos is no longer a minor issue

—it's draining your profitability.

- **Dispersed SKUs**

→ More models mean more fragmented SKUs, forcing you to carry heavier inventory and tying up more working capital.

- **Unpredictable demand**

→ Fluctuating demand for iPhone 12–16 series makes every replenishment risky—either you overstock or run out.

- **High cost of multi-model launches**

→ Every new launch demands separate materials and stock for each model, doubling your workload and slowing time-to-market.

More than a case

✓ A solution that simplifies SKUs and enhances sell-through efficiency.

1 case compatible with 5 models

- SKUs reduced from 5 to 1 → 80% inventory reduction
- more working capital freed up

Inventory comparison

✓ Take the iPhone Base series (iPhone 12–16) as an example:

Conventional Approach:

- Number of SKUs: 5
- Stock per SKU: 300 pcs
- Inventory cost per unit: USD 1.80
- Total inventory units: $5 \times 300 = 1,500$ pcs
- Total inventory value: $1,500 \times \text{USD } 1.80 = \text{USD } 2,700$

Comparison Result:

	Conventional	C&T	Result
Number of SKUs	5	1	4 fewer SKUs
Inventory units	1,500 pcs	300 pcs	1,200 fewer units
Inventory value	USD 2,700	USD 540	USD 2,160 less capital tied up

With C&T Solution:

Using 1 Case Fits 5 iPhone Models

Retailers only need:

- Number of SKUs: 1
- Stock quantity: 300 pcs
- Inventory cost per unit: USD 1.80
- Total inventory units: 300 pcs
- Total inventory value: $300 \times \text{USD } 1.80 = \text{USD } 540$

Reduction rate:

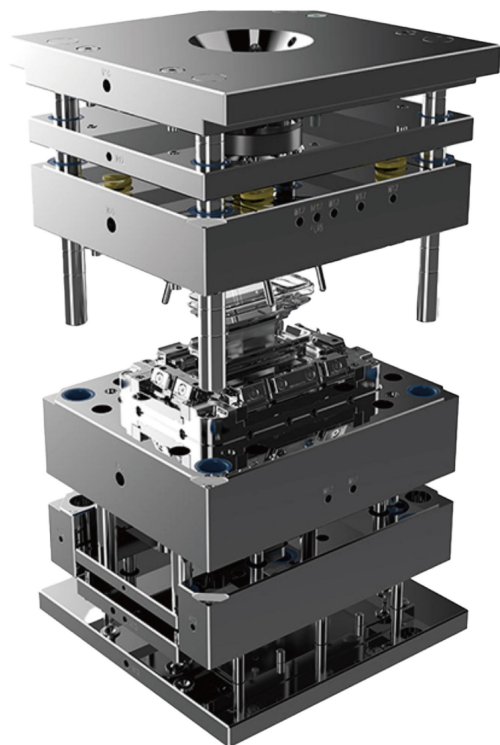

80%

- ✓ Reduce slow-moving and obsolete inventory risk
- ✓ Simplify purchasing, warehousing, and replenishment
